PREAMBLE

The new course four years Undergraduate Degree (CBCS Semester Mode) has been prepared, as per the "Guidelines for Multiple Entry and Exit in Academic programmes offered in Higher Education Institutions" issued by UGC, New Delhi Under National Education Policy 2020 (Ordinance 14 A) and keeping in view, the unique requirements of B.Sc. (H) Food Technology students. The objectives of the course are-

- To impart knowledge of various areas related to Food Science and Technology,
- To enable the students to understand food composition and its physico- chemical, nutritional, microbiological and sensory aspects,
- To familiarize the students about the processing and preservation techniques of pulses, oilseeds, spices, fruits and vegetables, meat, fish, poultry, milk & milk products,
- To emphasize the importance of food safety, food quality, food plant sanitation, food laws and regulations, food engineering and packaging in food industry.

The contents have been drawn-up to accommodate the widening horizons of the discipline of Food Technology. They reflect the current changing needs of the students. For the Generic elective(GE) to be chosen by Food Technology students, It is recommended that subjects like Biochemistry, Biology, Chemistry, Maths & statistics, Biostatistics, Physics be chosen as they are synergistic to the curriculum. However, students are free to pick up any of the Generic Elective Courses offered by other departments.

- For each paper, the objectives have been listed and the contents divided into units.
- The detailed syllabus for each paper is appended with the list of suggested readings.

Teaching time allotted for each paper shall be 4 periods for each theory paper and 4 periods for each practical class per week for each paper per week. Each practical batch should ideally be between 15-20 students so that each student receives individual attention.

Programme Mission:

The purpose of the programme is creation of knowledgeable human resources to work in Government, Semi-Government, Private and Public sector owned Food Technology and Food Processing organizations and also to assume administration positions. With further progression in education, graduates should be able to undertake teaching and research in colleges and universities as well as in scientific organizations.

Graduate Attributes:

1. Ability to apply fundamental knowledge of Biology, Biochemistry, Food Chemistry, Food Microbiology for developing food products and preservation.
2. Ability to develop technologies for food processing and preservation
3. Ability to develop processes for food product development
4. Ability to test food for quality, safety and nutrition
5. Ability to develop packaging for preservation and distribution
6. Ability to perform administrative duties in government, semi-government, private and public sector organizations
7. Ability to teach in schools, colleges and universities with additional qualification and training
8. Ability to understand and solve scientific problems by conducting experimental investigations
9. Ability to apply appropriate tools, techniques and understand utilization of resources appropriately in various laboratories
10. Ability to understand the effect of scientific solutions on legal, cultural, social and public health and safety aspects

11. Ability to develop sustainable solutions and understand their effect on society and environment
12. Ability to apply ethical principles to scientific practices and professional responsibilities
13. Ability to work as a member of a team, to plan and to integrate knowledge of various disciplines and to lead teams in multidisciplinary settings
14. Ability to make effective oral presentations and communicate technical ideas to a broad audience using written and oral means
15. Ability to adapt to the changes and advancements in science and engage in independent and life-long learning

Programme Objective:

The Bachelor of Science honours degree programme in Food Technology imparts knowledge and understanding of Biology, Biochemistry, Food Chemistry, Food Microbiology, Food Science, Food processing, Food safety, Food quality, Food product storage, Food product preservation, Food product packaging and Food product distribution.

The Programme also provides sufficient understanding and cognitive abilities to design and develop technologies for food processing, preservation and packaging as per the legal and safety requirements. In addition, the programme imparts knowledge and training to develop transferable skills and entrepreneurship abilities.

The objectives of the programme are to enable the students to:

1. To impart knowledge of Biology, Food -Biochemistry, Food Chemistry and Food Microbiology
2. To impart knowledge and understanding of technology of vegetables, fruits, plantation crops, meat, poultry, dairy and sea foods, bakery and confectionery.
3. To impart abilities to design technologies for food processing and food preservation
4. To impart abilities to design and develop food packaging and distribution
5. To train students on use of various instrumentation for the evaluation of food quality and safety
6. To train students to conduct scientific experiments and document scientific investigations
7. To educate on professional ethics, economics, social sciences, inter personal and communication skills relevant to professional practice,
8. To provide a general perspective on lifelong learning and opportunities for a career in industry, scientific organization, education, business and commerce

Intended Learning Outcomes of the Programme:

The Intended Learning Outcomes (ILOs) are listed under four headings:

1. Knowledge and Understanding,
2. Cognitive Skills
3. Practical Skills and
4. Capability /Transferable Skills.

Knowledge and Understanding:

After undergoing this programme, a student will be able to:

1. Explain with illustrations chemical, biochemical and microbiological phenomenon as applied to food processing and preservation
2. Explain various food processing, preservation and packaging technologies
3. Recognize the importance of food quality, safety and nutrition

Sudh
No

✓

4. Describes technologies of vegetables, fruits, cereals, millets, plantation crops, meat, poultry, dairy products, sea foods, bakery and confectionery

Practical Skills:

After undergoing this programme, a student will be able to:

1. Choose appropriate instrumentation system for testing and evaluation of food products
2. Operate machines and systems that process and package food
3. Market and Distribute Food products
4. Assess demand for new food products and economics of food products

Capability / Transferable Skills

After undergoing this programme, a student will be able to:

1. Manage information, develop scientific reports and make presentations
2. Build, Manage and Lead a team to successfully complete a project and Communicate across teams and organizations to achieve professional objectives
3. Work under various constraints to meet project targets

Adopt to the chosen profession by continuously upgrading his/her knowledge and understanding through Life-long Learning philosophy

After completion of the program of B.Sc. (Hons.), Food Technology, every student will know the following attributes:

1. An ability to apply the knowledge of science, microbiology and technology.
2. An ability to apply the knowledge of underlying chemistry, properties and effects of processing on food components.
3. An ability to use the techniques, skills, and modern tools necessary food processing operations.
4. Demonstrate knowledge and understanding of technology and management principles, manage projects efficiently in food science and technology and multidisciplinary environments after consideration of economical and financial factors.
5. An ability to design and conduct experiments, as well as to analyze and interpret data.
6. An ability to apply knowledge for production of safe food and shelf-life extension of food products.
7. An ability to identify, formulate, and solve food science and technology problems.
8. An ability to extract information pertinent to unfamiliar problems through literature survey and experiments, apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyze and interpret data. Contribute individually/in group(s) to the development of scientific/technological knowledge in food science and technology

VIKRAM UNIVERSITY, UJJAIN MP
B. Sc. (Hons) FOUR YEARS (EIGHT SEMESTERS), CBCS SCHEME (NEP-2020)
(Session -2021-2022)
SUBJECT-FOOD TECHNOLOGY

The Students will get:

1. Certificate after completion of 1st Year (40 credits)
2. Diploma after completion of 2nd Years (80 credits)
3. B. Sc.(Hons.) Degree after completion of 3rd Year (120 credits)
4. B. Sc.(Hons.) with Research degree after completion of 4th Year (160 credits)

SEMESTER- Ist

S.N.	Code	Name of Course	Type of Course	Distribution of Credits			Max. Marks		Total
				T	P	Total	Internal Max.	External Max.	
1	FTB 101	Fundamentals of Food Technology	*Core-1 Major-I	3	-	3	40	60	100

SUBJECT: FOOD TECHNOLOGY (HONS) FIRST YEAR, CBCS SCHEME**SEMESTER-I****COURSE CODE NO.: FTB 101: FUNDAMENTALS OF FOOD TECHNOLOGY (*CORE-I MAJOR I)****Course Objective:**

The objective of the course is to impart:

- 1- The knowledge about basic concepts of food technology and recent trends
- 2- The knowledge about basic biology, chemistry, and microbiology of foods

Course Outcome:

To enable the students to:

1. To understand the history and evolution of food processing.
2. To study the structure, composition, nutritional quality and post harvest changes of various plant foods.
3. To study the structure and composition of various animal foods.

Unit I Introduction

Scope of food science and Technology, Functions of food, Nutrients, Water, Carbohydrates, Proteins, Lipids, Vitamins and Minerals

Unit II Composition and nutritive value

Pulses & Legumes, Nuts & Oilseeds, Meat, Fish, Egg and Milk Structure and composition of wheat and Rice, Classification and Composition of Fruits, Vegetables and Spices.

Unit III Food Quality Assessment

Sensory assessment-Appearance of food- visual perception, colour of foods, smell, flavour and taste, Threshold tests, difference tests, ranking test & hedonic scale

Unit IV Food Additives

Preservatives, coloring agents, flavour and flavour enhancer, Anti-oxidants, Artificial sweeteners, stabilizers, thickening agents, anticaking agents, bleaching and maturing agents, flour improvers, leavening agents, surface active agents.

Unit V Health foods

Functional foods, Prebiotics, Probiotics, Nutraceuticals, organic foods, GM foods

Unit VI Food Research & Food Technology updates

Major centres of food research in India –CFTRI, DFRL, NIFTEM, IICPT & CIFT. Major Food Industries in India, Journals of Food Science & Technology, Indian Food Industry, Beverage, Food World, Indian Food Packer, AFST (I)

Suggesting Readings:

1. Potter NN, Hotchkiss JH. Food Science. CBS publishers and distributors
2. S. Manany, N S. Swamy Food Facts and Principles. New Age International Publishers
3. Murano, Peter S. Understanding Food Science and Technology .Thomson

4. Sumati R Mudambi , Rajagopal M V. Fundamentals of Food and Nutrition. New Age International Publishers
5. Shubhangini A Joshi . Nutrition and Dietics. Tata McGraw Hill Education Private Limited
6. Vijaya Khader. Text Book of Food Science and Technology. ICAR
7. Swaminathan M. Food Science Chemistry and Experimental Foods. Bappco
8. Journals: Indian Food Industry

Seal
MS

COURSE CODE NO.: FTB 102: PRINCIPLES OF FOOD SCIENCE(CORE-2 MAJOR II)**Course Objective:**

The student will develop an understanding of world food production, principles of consumerism, the importance of food safety and procedures in processing, packaging, and storage of foods, and career opportunities in the food science and technology field.

Course Outcome:

Upon successful completion of this course, students will:

- 1- Identify the principles of food science related to food production, quality, safety, nutrition, and distribution.
- 2- Describe common and emerging technologies in food science.
- 3- Explain how engineering, microbiology, and chemistry are applied in food production and processing systems.
- 4- Describe food safety procedures in Indian production systems.
- 5- Demonstrate appropriate food handling/food safety procedures.
- 6- Explain nutrient composition and the link between nutrition and health.
- 7- Examine the dynamics of global food supply.

Unit I: Food dispersions:

Characteristics, sols, gels, pectin gels, colloidal sols, stabilization of colloidal system, syneresis, emulsions, properties of emulsions, formation of emulsion, emulsifying agent, food foams, formation stability and destruction of foam, application of colloidal chemistry to food preparation.

Unit II: Sensory evaluation of food:

Objectives, type of food panels, characteristics of panel member, layout of sensory evaluation laboratory, sensitivity tests, threshold value, paired comparison test, duo- trio test, triangle test, hedonic scale, chemical dimension of basic tastes, Amoore's classification of odorous compounds; Sherman and Szczniak classification of food texture.

Unit III: Growth of microorganisms in foods:

Food as a substrate for microorganism, factors affecting growth of microbes: pH, water activity, O-R potential, nutrient contents, inhibitory substance and biological structure.

Hurdle technology: Principles and applications, Hurdle effect in fermented foods, shelf stable products, intermediate moisture foods, application of hurdle technology.

Unit IV: Minimal processing:

Minimal processing of foods with thermal methods and non thermal methods-safety criteria in minimally processed foods-Minimal processing in practice-fruits and vegetables-seafood-effect on quality-Future developments

Ohmic heating and High Pressure processing: Principles, equipment and processing, effect on food.

Unit V: Water disposal and sanitation:

Waste water; hardness of water, break point chlorination, physical and chemical of impurities; BOD, COD, waste water treatment, milk plant sanitation, CIP system, sanitizers used in food industry.

Sudh
MS

MS

Packaging

Objectives of packaging, flexible packaging, properties of the following packaging materials-low density polyethylene, high density polyethylene, polypropylene, polyvinyl chloride, polyvinylidene chloride, ethylene vinyl alcohol, polystyrene, polyethylene terephthalate, nylon, ethylene vinyl acetate, ethylene acrylic acid, ethylene methacrylic acid, ionomers.

Suggestive Readings:

1. Coles R, McDowell D and Kirwan MJ, Food Packaging Technology, CRC Press, 2003
2. De S, Outlines of Dairy Technology, Oxford Publishers, 1980
3. Deman JM, Principles of Food Chemistry, 2nd ed. Van Nostrand Reinhold, NY 1990
4. Frazier WC and Westhoff DC, Food Microbiology, TMH Publication, New Delhi, 2004
5. Jenkins WA and Harrington JP, Packaging Foods with Plastics, Technomic Publishing Company Inc., USA, 1991
6. Manay NS and Shadaksharaswamy M, Food-Facts and Principles, New Age International (P) Ltd. Publishers, New Delhi, 1987
7. Meyer LH, Food Chemistry, CBS Publication, New Delhi, 1987
8. Potter NH, Food Science, CBS Publication, New Delhi, 1998
9. Ramaswamy H and Marcott M, Food Processing Principles and Applications CRC Press, 2006

COURSE CODE NO.: FTB 103: FOOD CHEMISTRY (MINOR-1)**Course Objective:**

The objective of the course is to provide the students with a deep understanding of how food components contributes to overall quality of foods; and to enable students to evaluate and explain how the highly complex nature of food may result in a multitude of desired and undesired reactions which are controlled by a variety of foods .

Course Outcome:

To enable the students to:

- 1.To understand the chemistry of foods - composition of food, role of each component and their interaction.
- 2.To understand the functional aspects of food components and to study their role in food processing.
- 3.To understand the chemistry of food components and their interactions.
- 4.To know about the role of enzymes and various processing treatments in food industry.
- 5.To understand the concept of new product development.

Unit I: Introduction to Food Chemistry: Definition, Composition of food

Water: Definition of water in food; Structure of water and ice; Types of water; Sorption phenomenon; Water activity and packaging; Water activity and shelf-life

Lipids: Classification of lipids ; Physical properties-melting point, softening point, specific gravity; refractive index, smoke, flash and fire point, turbidity point; Chemical properties- reichertmeissel value, polenske value, iodine; value, peroxide value, saponification value; Effect of frying on fats ; Changes in fats and oils- rancidity, lipolysis, flavor reversion; Auto-oxidation and its prevention ; Technology of edible fats and oils- Refining, Hydrogenation and; Interesterification, Fat Mimetics

Unit II: Proteins: Protein classification and structure; Nature of food proteins(plant and animal proteins);

Properties of proteins (electrophoresis, sedimentation, amphotericism and; denaturation,); Functional properties of proteins eg. organoleptic, solubility, viscosity ,binding gelation / texturization , emulsification , foaming.

Carbohydrates: Classification (mono, oligo and poly saccharides); Structure of important polysaccharides (starch, glycogen, cellulose, pectin; hemicellulose, gums); Chemical reactions of carbohydrates –oxidation, reduction, with acid & alkali ; Modified celluloses and starches

Vitamins: Structure, Importance and Stability; Water soluble vitamins ; Fat soluble vitamins

Unit III: Flavour: Definition and basic tastes; Chemical structure and taste; Description of food flavours; Flavour enhancers

Minerals: Major and minor minerals; Metal uptake in canned foods; Toxic metals

Natural Food Pigments: Introduction and classification; Food pigments (chlorophyll, carotenoids, anthocyanins and flavonoids, beet pigments, caramel)

Unit IV: Browning Reactions In Food: Enzymatic browning; Non – Enzymatic browning; Maillard reaction; Caramelization reaction; Ascorbic acid oxidation

Enzymes: Introduction, classification ; General characteristics; Enzymes in food processing; Industrial Uses of Enzymes ; Immobilized enzymes

Pradeep
MS

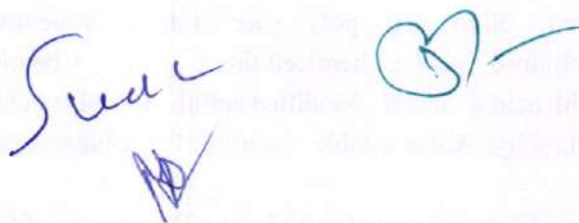

Unit V: Physico-chemical and nutritional changes occurring during food processing treatments; Drying and dehydration; Irradiation; Freezing; Canning

New product development: Definition; Importance; Need of product development; Steps of product development;-; Product development tools; Reasons for failure

Sua
B

COURSE CODE NO.: FTB 104: FOOD ADULTERATION (GEC-1)**Course Objective:**

1. To provide theoretical basis of adulteration test of food products and learn adulteration testing methods of food through hands-on experience.
2. To provide hands-on training using the latest analysis techniques, instruments and methods to analyzed food samples

Course Outcome:

- 1.To introduce students to food safety and standardization act and quality control offoods.
2. To educate about common food adulterants and their detection.
- 3.To impart knowledge in the legislative aspects of adulteration.
- 4.To educate about standards and composition of foods and role of consumer

Unit – I

Food adulteration – Introduction of Food adulteration, definition; new adulterants in foods, Historical Food legislation in India; Central food laboratory, Municipal laboratories, Export inspection council laboratory, Central grain analysis laboratory, standards of weights and measures act, solvent extracted oil deoiled meal and edible flour order, export and quality control and inspection act and other acts and orders.

Unit – II

Food Safety and Standards Act 2006.vertical standards Vs horizontal standards
Food safety officer; powers, procedures, role of food analyst most important international laws; Codex alimentarius, FDA, USDA, FAO and WHO
Other International regulatory bodies like EFSA –European food safety authority Food standards of Australia and Newzealand , Soudi Arabia food regulations

Unit– III

Consumer protection; role of voluntary agencies such as, Agmark, I.S.I. Quality control laboratories of companies ,private testing laboratories, Quality control laboratories of consumer co-operatives,.

Unit-IV

Standardization of Foods; Definition, Standards of Quality, for cereals, starchy foods, spices and condiments, sweetening agents, meat and meat products, vinegar, sugar and confectionary, beverages-alcoholic and non alcoholic , carbonated water etc., Milk and milk products , oils and fats , Canned foods , fruits and vegetables products.

Unit-V

Food additives – classification, nature and characteristics and use of additives in food such as antioxidants, chelating agents, coloring agents, curing agents, emulsions, flavors and flavor enhancers, flour improvers, humectants and anti caking agents, nutrient supplements, non-nutritive sweeteners, pH control agents, stabilizers and thickeners. Raising agents – types and their role in food processing., artificial colorsArtificial flavors

Consumer education, consumer's problems rights and responsibilities, copra 1986, tips for wise purchasing, redressal measures how to give complaints and proforma of complaints

Suggesting Readings:

1. A first course in Food Analysis – A.Y. Sathe, New Age International (P) Ltd., 1999.
2. Food Safety, case studies – Ramesh. V. Bhat, NIN, 1992.

COURSE CODE: FTB 105: MEDICAL DIAGNOSTICS (VOCATIONAL COURSE) (SEC-1)****Course Objective:**

The major objective of this paper is to give idea about detection of pathogens in clinical samples and different diagnostics methods used in pathological laboratories.

Course Learning Outcome:

Upon successful completion of the course, the student:-

1. Understand the importance and challenges in detecting pathogens.
2. Learn about the collection and transport of clinical samples.
3. Learn about different diagnostic methods.

Unit-I:

Types of Diseases- Bacterial (Tuberculosis, Cholera and Typhoid), Viral (Influenza, Herpes and HIV), Fungal (Aspergillosis, Blastomycosis and Candidiasis) and Protozoan (Malaria, Balantidiasis and Amoebiasis), Pathogenesis,

Unit-II:

Collection of clinical samples (Oral cavity, throat, Urine, Skin, Blood, CSF and feces) and their precautions

Methods of transport of clinical samples to laboratory and storage, Laboratory diagnosis of clinical samples

Unit-III:

Types of Culture Media, Preparation and use of culture media- PDA, SDA, Nutrient Agar, Blood Agar, Mac Conkey Agar, L-J media, and Differential media, selective and Enrichment media.

Cultivation of clinical sample, Identification of Pathogenic Microorganisms by Gram's staining, Acid fast staining, Giemsa staining, Lacto-phenol Cotton Blue Staining,

Unit IV:

Biochemical methods- IMViC, TSIA, Oxides, catalase, Pathogenicity test: Blood Agar, Coagulase test, Fibrinolyses,, Serological Methods- Agglutination, ELISA, SEM, PCR, Electrophoresis.

Widal test, Khan's test, Blood grouping,

Unit V:

Antibiotic sensitivity test for Bacteria and Fungi, Determination of resistance/Sensitivity of bacteria using antibiotics disc diffusion method, Determination of MIC and LD50.

SUBJECT: FOOD TECHNOLOGY (HONS) FIRST YEAR, CBCS SCHEME
SEMESTER-II
COURSE CODE NO.: FTB 201: TECHNOLOGY OF FOOD PRESERVATION
(*CORE-3 MAJOR III)

Course Objective:

The goal of this course is to provide students with a fundamental understanding of food preservation and food packaging techniques and to ensure students are technically ready for the food industry through a practical, problem-solving approach, Reuse, disposability and printing of packaging.

To study the importance microorganisms in food preservation

To introduce the basics of various food processing and preservation technologies

Course Outcome:

To enable the students to:

1. Understand scientific principles underlying food storage and preservation.
2. Learn the principles and processes of different methods of food preservation.
3. Develop skills and techniques in food preservation for ensuring safety, conservation of nutrients, and palatability.

Unit I- Food Microbiology

Principles of Food Preservation, microorganisms associated with foods- bacteria, yeast and mold, Importance of bacteria, yeast and molds in foods. Classification of microorganisms based on temperature, pH, water activity, nutrient and oxygen requirements, typical growth curve of micro-organisms. Classification of food based on pH, Food infection, food intoxication, definition of shelf life, perishable foods, semi perishable foods, shelf stable foods.

Unit II-Food Preservation by Low temperature

Freezing and Refrigeration : Introduction to refrigeration, cool storage and freezing, definition, principle of freezing, freezing curve, changes occurring during freezing, types of freezing i.e. slow freezing, quick freezing, introduction to thawing, changes during thawing and its effect on food.

Unit III Food Preservation by high temperature

Thermal Processing- Commercial heat preservation methods: Sterilization, commercial sterilization, Pasteurization, and blanching.

Unit IV Food Preservation by Moisture control

Drying and Dehydration - Definition, drying as a means of preservation, differences between sun drying and dehydration (i.e. mechanical drying), heat and mass transfer, factors affecting rate of drying, normal drying curve, names of types of driers used in the food industry.

Evaporation – Definition, factors affecting evaporation, names of evaporators used in food industry.

Unit V Food Preservation by Irradiation

Introduction, units of radiation, kinds of ionizing radiations used in food irradiation, mechanism of

*Suele**Mp**51*

action, uses of radiation processing in food industry, concept of cold sterilization.

BT

COURSE CODE NO.: FTB 202: FOOD PROCESSING TECHNOLOGY(CORE-4 MAJOR IV)**Course Objective:**

- 1.The course will give students an understanding of the advanced principles of food processing and how to choose a method of processing in relation to food composition.
- 2.Occupational health and safety, food safety and food quality aspects of food and beverage processing are an integral component of all coursework.
- 3.This course has an advanced food processing component and overview conventional and emerging novel food processing methods available to maximize the nutrition levels in the making of foods that are safe, high quality and with maximum shelf life and convenience.
- 4.The course explores various advanced methods of food processing technology available in India.
- 5.Introduce different engineering approaches for processing of food products
- 6.To understand the food property required in optimal food processing
- 7.Minimal loss of food quality of developing new food or food products.
- 8.Engineering processing approaches for good food quality or food safety
- 9.To develop the optimal processing condition for transformed of foods
10. To apply standard processing conditions for good food products

Course Outcome:

To impart basic knowledge of:

- 1.After the completion of this course, the student will be able to
- 2.Understand the principle of non-thermal modes of food processing, use thermal processing for minimal nutrition losses, obtain higher nutritional quantity during food processing, and understand the application and limitations of non-thermal food processing.
- 3.The student will be able to understand the importance of food quality standards, use recommended food quality guidelines or standards for food safety, assess foods for checking quality, understand the mechanisms from prevention to control of food hazards
- 4.The student will be able to explain the nutritional significance during food processing, summarize techniques and equipment used in food processing, appreciate the importance of processed foods for world, apply recommendation and standards of different foods at industrial production

Unit I: Cold preservation:

Freezing: requirements of refrigerated storage - controlled low temperature, air circulation and humidity; changes in food during refrigerated storage, progressive freezing; changes during freezing – concentration effect and ice crystal damage, freezer burn. Refrigeration load, factors determining freezing rate-food composition and non compositional influences

Freezing- Mechanism and freezers:

Freezing methods -direct and indirect, still air sharp freezer, blast freezer, fluidized freezer, plate freezer, spiral freezer and cryogenic freezing.

Unit II: Dehydration:

Normal drying curve , effect of food properties on dehydration , change in food during drying , drying methods and equipments air convection dryer, tray dryer, tunnel dryer ,continuous belt dryer , fluidized bed dryer, spray dryer, drum dryer, vacuum dryer, freeze drying ,foam mat drying.

Food Irradiation and Microwave Heating:

Scanned
M

BT

Ionizing radiation and sources; unit of radiations, direct and indirect radiation effects; safety and wholesomeness of irradiated food; Microwave heating and application.

Unit III: Packaging of foods:

Packaging: Properties of packaging material, factors determining the packaging requirements of various foods and brief description of packaging of frozen products, dried products, fats and oils and thermally processed foods

Unit IV: Material handling

Elementary concept of material handling in food industry; equipment and functioning of belt conveyor, screw conveyor, bucket elevator and pneumatic conveyor.

Unit V: Thermal processing

Introduction, classification of Thermal Processes, Principles of thermal processing, Thermal resistance of microorganisms, Thermal Death Time, Lethality concept, characterization of heat penetration data, Thermal process Calculations

Separation processes

Principles and methods of: distillation, extraction, washing, filtration, sedimentation, sieving and centrifugation

COURSE CODE NO.: FTB 203: FUNCTIONAL FOODS AND NUTRACEUTICALS (MINOR-2)**Course Objective:**

- 1.The objective of this course is to discuss several classes of functional foods and nutraceuticals and identify the specific compounds that have health promoting properties.
- 2.Discussion will also focus on the structure-function/dynamic-mechanisms relationship with both human and animal systems leading to the observed benefits.

Course Outcome:

To enable the students to:

- 1.Develop an understanding of the concept and classification of functional foods and nutraceuticals.
- 2.Appreciate of the potential health benefits of functional foods and nutraceuticals.
- 3.Highlight the importance of safety and efficacy of functional foods and ingredients.
- 4.To develop comprehensive understanding of different nutraceuticals and functional foods
- 5.To understand the potential of various functional foods in promoting human health

Unit I: Introduction:

Background, status of nutraceuticals and functional food market, definitions, difference between nutraceuticals and functional foods, types of nutraceutical compounds and their health benefits, current scenario.

Unit II: Nutraceuticals:

Types of nutraceutical compounds – Phytochemicals, phytosterols and other bioactive compounds, peptides and proteins, carbohydrates (dietary fibers, oligosaccharides and resistant starch), prebiotics, probiotics and symbiotic, lipids (Conjugated Linoleic Acid, omega-3 fatty acids, fat replacers), vitamins and minerals; their sources and role in promoting human health.

Unit III: Functional Foods:

Cereal and cereal products, Milk and milk products, egg, oils, meat and products, sea foods, nuts and oilseeds, functional fruits and vegetables, herbs and spices, beverages (tea, wine etc), Fermented foods – their health benefits and role in conditions like cardiovascular diseases, hypertension, diabetes etc.

Unit IV:

Future prospects of functional foods and nutraceuticals and their potential for use in improving health; Development in processing of functional foods; Formulation and fabrication of functional foods.

Unit V: Legal Aspects:

Stability of nutraceuticals; Safety, Consumer acceptance and assessment of health claims, labeling, marketing and regulatory issues related to nutraceuticals and functional foods

Suggesting readings:

1. Wildman REC, Handbook of Nutraceutical and Functional Foods, CRC Press 2001
2. Ghosh D et al, Innovations in Healthy and Functional Foods, CRC Press 2012
3. Pathak YV, Handbook of nutraceuticals Volume 2, CRC Press 2011
4. Various journals of food technology, food science and allied subjects.

5. Ranganna S.1986. Handbook of analysis and quality control for fruits and vegetable products, Tata McGraw-Hill publishing company limited, second edition

COURSE CODE NO.: FTB 204: INTELLECTUAL PROPERTY RIGHTS (GEC-2)**Course Objective:**

1. To introduce fundamental aspects of Intellectual property Rights to students who are going to play a major role in development and management of innovative projects in industries.
2. To disseminate knowledge on patents, patent regime in India and abroad and registration aspects
3. To disseminate knowledge on copyrights and its related rights and registration aspects
4. To disseminate knowledge on trademarks and registration aspects
5. To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects
6. To aware about current trends in IPR and Govt. steps in fostering IPR

Course Outcome:

1. The students once they complete their academic projects, shall get an adequate knowledge on patent and copyright for their innovative research works
2. During their research career, information in patent documents provides useful insight on novelty of their idea from state-of-the art search. This provide further way for developing their idea or innovations
3. Pave the way for the students to catch up Intellectual Property (IP) as an career option:
 - a. R&D IP Counsel
 - b. Government Jobs – Patent Examiner
 - c. Private Jobs
 - d. Patent agent Patent agent and Trademark agent
 - e. Entrepreneur

Unit I: Introduction to intellectual property right (IPR):

Concept and kinds; Economic importance; IPR in India and world: Genesis and scope, some important examples. IPR and WTO (TRIPS, WIPO).

Unit II: Patents:

Objectives, Rights, Patent Act 1970 and its amendments; Procedure of obtaining patents; working of patents; Infringement

Copyright: Introduction, Works Infringement. protected under copyright law, Rights, Transfer

Trademarks: Objectives, Types, Rights, Protection of goodwill, Infringement, Passing off, Defenses', Domain name.

Unit III: Geographical Indications:

Objectives, Justification, International Position, Multilateral Treaties, National Level; Indian Position;

Protection of Traditional Knowledge: Objective, Concept of Traditional Knowledge, Holders, Issues concerning, Bio-Prospecting and Bio-Piracy, Alternative ways, Protect ability, need for a Sui-Generis regime, Traditional Knowledge on the International Arena, at WTO, at National level, Traditional Knowledge Digital Library.

Unit IV: Industrial Designs:

Objectives, Rights, Assignments, Infringements, Defenses' of Design Infringement

Protection of Plant Varieties: Plant Varieties Protection-Objectives, Justification, International Position, Plant varieties protection in India; Rights of farmers, Breeders and Researchers; National gene bank, Benefit sharing; Protection of Plant Varieties and Farmers' Rights Act, 2001;

Unit V: Information Technology Related Intellectual Property Rights:

Computer Software and Intellectual Property, Database and Data Protection, Protection of Semi-conductor chips, Domain Name Protection

Biotechnology and Intellectual Property Rights: Patenting Biotech Inventions: Objective, Applications, Concept of Novelty, Concept of inventive step, Microorganisms, Moral Issues in Patenting Biotechnological inventions.

Suggested Readings

- 1) N.S. Gopalakrishnan & T.G. Agitha, (2009) Principles of Intellectual Property Eastern Book Company, Lucknow.
- 2) Kerly's Law of Trade Marks and Trade Names (14th Edition) Thomson, Sweet & Maxweel.
- 3) Ajit Parulekar and Sarita D' Souza, (2006) Indian Patents Law – Legal & Business Implications; Macmillan India Ltd.
- 4) B.L.Wadehra (2000) Law Relating to Patents, Trade Marks, Copyright, Designs & Geographical Indications; Universal law Publishing Pvt. Ltd., India.
- 5) P. Narayanan (2010) Law of Copyright and Industrial Designs; Eastern law House, Delhi.

**COURSE CODE NO.: FTB 205: FIELD PROJECT/INTERNSHIP/
COMMUNITY ENGAGEMENT AND SERVICES-I**

Course Objective:

1. Field project/Internships/Community engagements are designed to expand the depth and breadth of academic learning for you in your particular areas of study.
2. It is an opportunity for you to receive experience in applying theories learned in the classroom to specific experiences in the community and work world.
3. An internship can also heighten your awareness of community issues, motivate you to create opportunities, embrace new ideas, and give direction to positive change.
4. A successful internship can give you valuable information in making decisions about the direction of future studies or employment.
5. An internship is an opportunity to not only use and develop industry-related knowledge and skills, but also to enhance some of the skills that are transferable to any professional work setting.
6. This internship may be your first introduction to the world of work, or maybe you have been exposed to professionalism many times before.
7. No matter where your skills and understanding of professionalism lie, your internship is a chance to develop them even further.

Course Outcome:

By the end of the internship, our hope is that you will have:

- 1- Linked academic theory to practice in your discipline;
- 2- Applied your knowledge, skills, experience to a work environment;
- 3- Acquired new learning through challenging and meaningful activities;
- 4- Reflected on the content and process of the learning experience;
- 5- Advocated for your own learning in alignment with internship goals;
- 6- Demonstrated professional skills in the workplace;
- 7- Built and maintained positive professional relationships;
- 8- Demonstrated awareness of community and/or organizational issues;
- 9- Identified, clarified and/or confirmed professional direction as it relates to your academic studies and future career path;
- 10- Developed self-understanding, self-discipline, maturity and confidence;
- 11- Developed strong networking/mentoring relationships.

Review of the state of research in a particular problem involving food, and development of hypothesis, Planning and conducting the experiment, Periodic analysis of data and preparation of report, Final preparation of project report as dissertation to be submitted in partial fulfillment of B.Sc. Programme.
