BFS tree tech. is based on prio. info. like hill climbing.

In hill climbing search tech. follow only shortest path acc. to given info. of element, that type of searching may be forward path wch is not contain any imp. element or searching element then may be psbl. searching is on worst case i.e. unnecessary searching will be follow.

BEE Systems, Ujjain (M.P.)

In BFS remove drawbacks of hill climbing searching technique. Such as in BFS control will be crossed to one path from another path.

Advantages →

- * BFS will always find good path to a goal.

Prof. Brahma Datta Shukla
9993883996

Disadvantage →

In BFS. the making of algorithm is very complex & typical to implement.
